

Recent scientific evidence is changing our common belief about human development and is supporting that purposeful intervention can change the brain at any age. At the Jacob Shapiro Brain Based Instruction Laboratory School in Oshkosh, we are in the fifth year of our journey as a charter school to better connect the mind, brain and education. The purpose of this session is to take you on our journey, our discovery of the foundation for learning - neuroscience. We will share neuroscience principles, our framework and specific instructional strategies and tools that foster improved student learning. We will share some of the data supporting the use of neuroscience instruction and its impact on learning.

### Site Visitation Day Schedule

- 8:30 to 8:35: Welcome and Introductions**
